On April 12, 2024, a Plant Drive was launched to encourage stakeholders to donate bougainvillea or birds-of-paradise plants, enhancing the Medical Arts Parking Building with a sustainable, environmentally friendly, and welcoming atmosphere. This initiative aims not only to beautify the hospital grounds but also to foster a healthier environment for patients, visitors, and staff. Both bougainvillea and birds-of-paradise are drought-resistant plants, making them ideal choices for promoting sustainability while reducing water consumption.

SLU YCE Embarks on Project Moss: Promoting Sustainability One Plant at a Time
YCE initiates change through environmental action with Project Greenify.

The SLU Youth Council of Ecolodians (YCE) has launched "Project Moss" and "Project Greenify," focusing on drought-resistant plants. In December 2023, YCE distributed 100 pieces of Spanish Moss (*Tillandsia usneoides*) on campus, enhancing biodiversity and air quality. In March 2024, they expanded their efforts by distributing 50 Snake Plants in comfort rooms, showcasing SLU's commitment to sustainability. YCE aims to nurture ecosystems and promote resilience through these initiatives, reinforcing the importance of integrating nature into campus life.
